

CENTRAL TYRE INFLATION SYSTEM

Off-road driving presents unique challenges and requires a specialised vehicle setup to ensure safety, performance and vehicle longevity. Proper tyre pressure is crucial when navigating rough terrain, and understanding how to adjust it can significantly enhance your off-road experience.

The Motorcraft Central Tyre Inflation System (CTIS) is designed to easily allow control of your tyre pressure.

Operation instructions:

- Set the appropriate tyre pressure on the control unit.
- Attach one hose to the pressure valve on each tyre.
- Allow system to reach desired pressure.
- For different pressure requirements on front / back axles, repeat above steps accordingly on the tyres that require different pressures.
- For vehicles that have more than two drive axles, multiple systems can be used simultaneously.

PRICE: £1500 +VAT

10% DISCOUNT APPLIED FOR MULTIPLE SYSTEMS.

WHAT'S INCLUDED?
