38-30	Toilets
40-41	Kitchen
42-43	Power System
45-55	Upgrade Options

I am proud to be able to introduce you to the newest addition to our range of services. The specifically designed classic range is an affordable choice for Overland Travel, built only from the highest quality materials.

They are provocatively priced at a price point only achieved by clever design, standardisation and efficiency in manufacture. These bodies utilise all the same materials as our bespoke builds in a desirable layout.

Based on over twenty-three years of truck building and tens of thousands of miles of overland travel. It is what I believe is the minimum requirement to safely and comfortably travel the globe.

The raw simplicity makes it easy to understand and operate the habitation body, suitable for everyone from solo travellers to small families. Ideal for mounting onto most vehicles.

There are a huge amount of optional extras to configure the vehicle to suit your needs so make sure you head over to our website and use our standard build cost calculator to get the information on the build you want.

As always our doors are always open and should you have any questions or want to come and meet us in person, give us a call and arrange to head over and we can get the kettle on.

*Jan Parkin-Coates*  
Founder & Owner

## Atacama 4m & 4.5m

The Atacama layout is the perfect layout for people that want to travel in a compact while retaining extreme off-road performance . It is best suited to smaller vehicles like Unimog's or similar. It utilises the smaller space in a very efficient manner and maintains functionality for full time overland travel.

### Bedroom

The 4.5m Atacama boasts a full size permanent double bed while the 4m version utilises a sliding bed that can be used in the stowed position as a single bed or slide out into a full size double, temporarily reducing the kitchen space. The bedroom has high level storage cupboards for the storage of clothing and other items.

### Kitchen

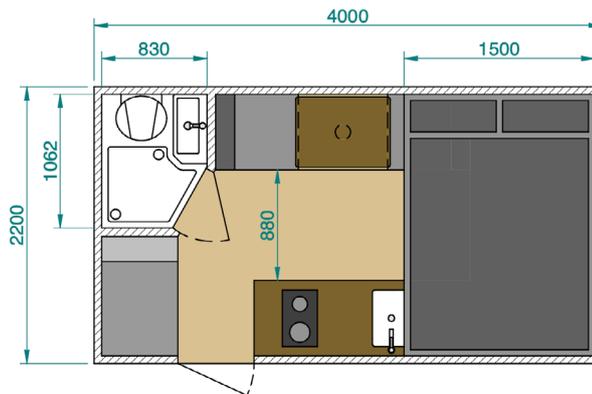

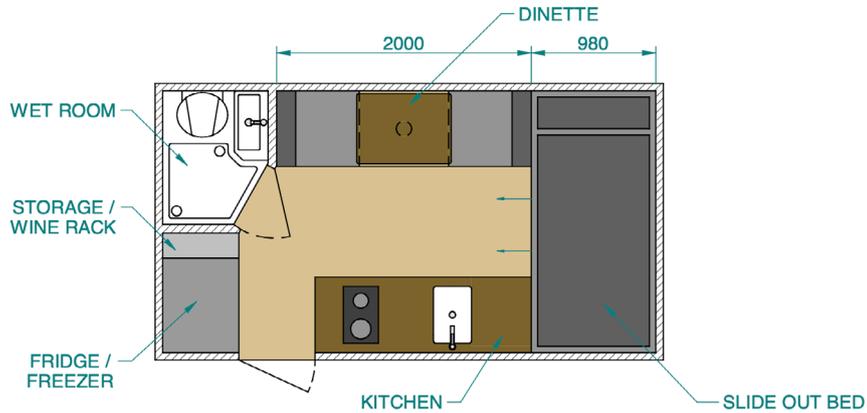

Both versions of the Atacama have a full size electric combination oven and two ring "gas under glass" hob. Ample storage throughout for such a compact design. Note that the 4m Atacama bed slides out over the kitchen worktop. Next to the door is a large fridge and a separate small freezer.

### Dinette

The integrated dinette gives plenty of seating for two people to sit down and enjoy an evening meal with the table in place, or the table can be removed and stowed in order to allow a little more space for lounging.

### Bathroom

There is no need to struggle with a tiny bathroom with the Atacama layout. Its spacious design incorporates a multi-drain shower tray, toilet and hand basin.

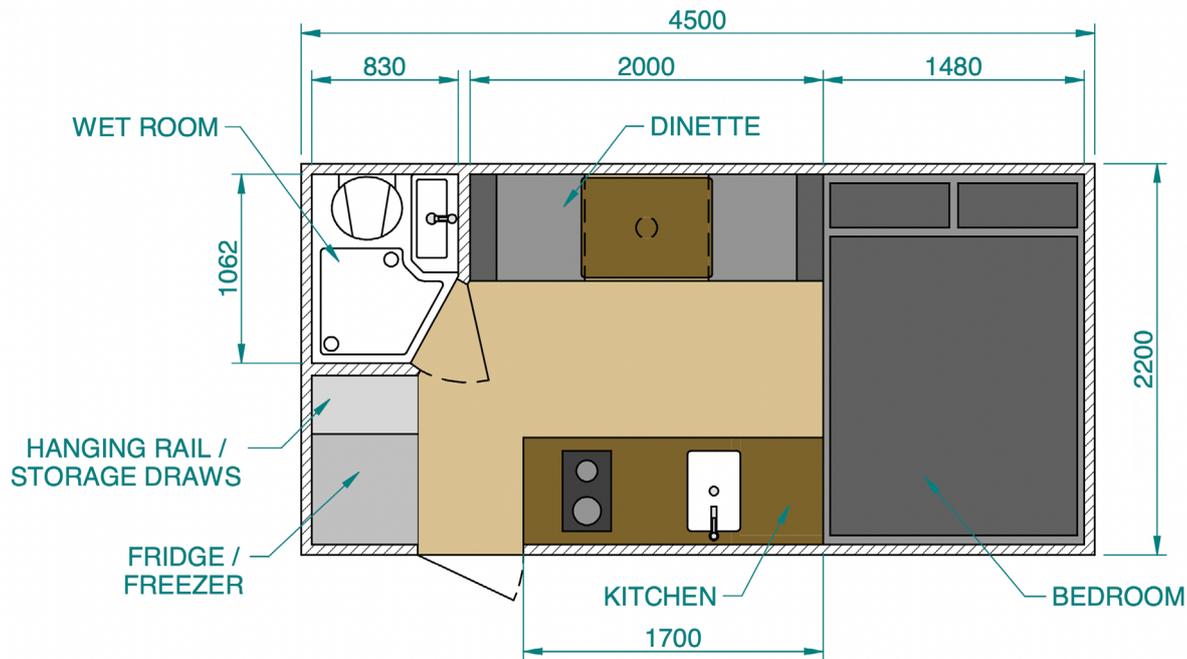

MOTORCRAFT ATACAMA 4M BODY

Notes

1. Floor can be flipped for UK/International use
2. High level storage not illustrated
3. Toilet and shower may need to switch sides depending on vehicle
4. Body width dependant on vehicle

### MOTORCRAFT ATACAMA 4.5M BODY

4.5m Atacama - View from Bedroom

## Kalahari Layout 5.5m

The Kalahari is the most sought after layout for overland vehicles of “medium” size as it offers an ergonomic design and efficient layout whilst retaining a stylish appearance.

It is available in both the 5.5m and 6m body lengths, making it suitable for medium-sized vehicles

Both lengths offer a permanent double bed and an ample seating area, which can be utilised as two temporary beds, making it a two plus two system (sleeps four); no wonder it is an ideal solution for those with occasional visitors.

### Bedroom

Offering a full sized double bed with ample over head storage this setup also includes a “Chest” at the foot of the bed for further storage.

### Kitchen

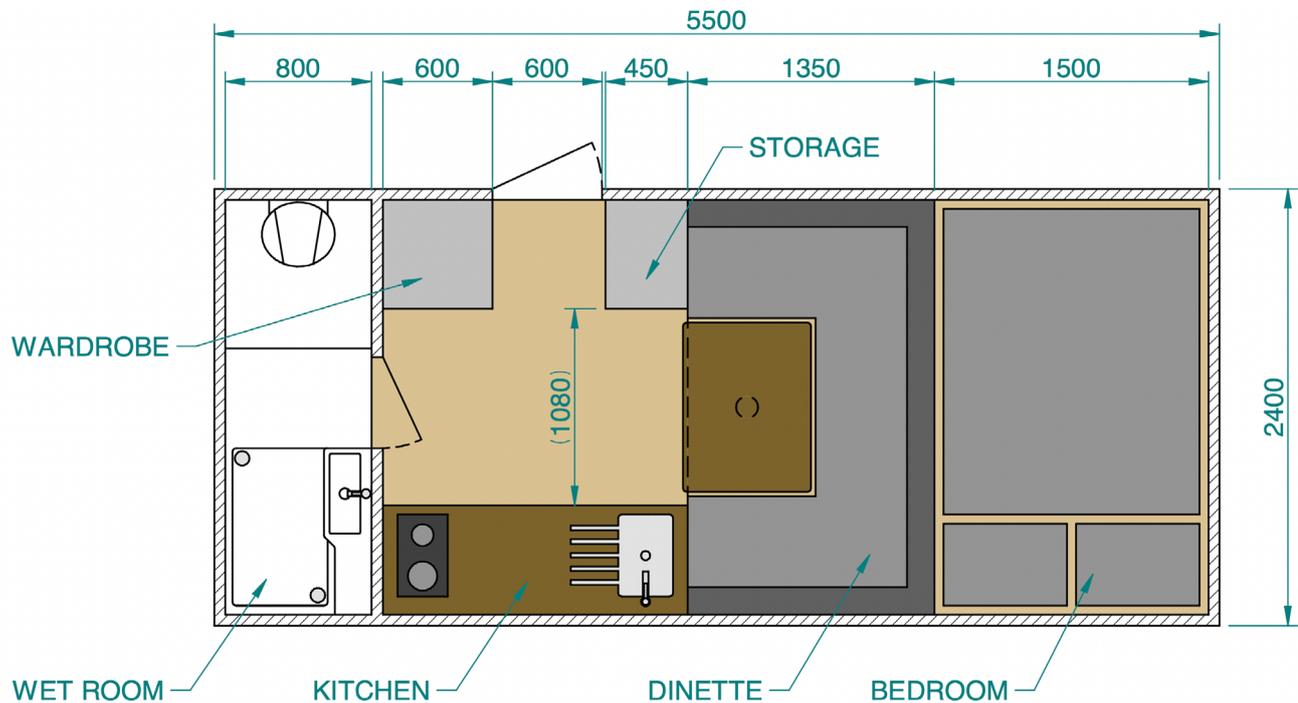

The generous kitchen in the design allows for the creative chef to cook up the perfect meal. Featuring a two burner gas under glass hob and electric combination oven giving plenty of cooking options. It has a huge stainless steel marine fridge freezer and plenty of storage.

### Dinette

The large “U” shaped dinette in the Kalahari makes for a fantastic multifunctional space. When the removable table is in space it easily seats three or four people to sit down and enjoy a nice meal.

### Bathroom

The huge bathroom on the Kalahari allows for the room to be cleanly divided into a shower and a toilet. This offers more usability than just a wet room.

### MOTORCRAFT KALAHARI 5.5M BODY

#### Notes

1. Floor can be flipped for UK/International use
2. High level storage not illustrated
3. Toilet and shower may need to switch sides depending on vehicle

Kalahari Layout

## Kalahari Layout 6m

The 6m Kalahari offers all the same functionality as the 5.5m however it is suited to vehicles with a longer wheel base. The extra half a meter provides you with additional storage space inside the cabin area.

**BUNK BEDS / BUNK BED & WORKSTATION**      **KITCHEN**      **DINETTE**      **BEDROOM**

**MOTORCRAFT GOBI 6M BODY**

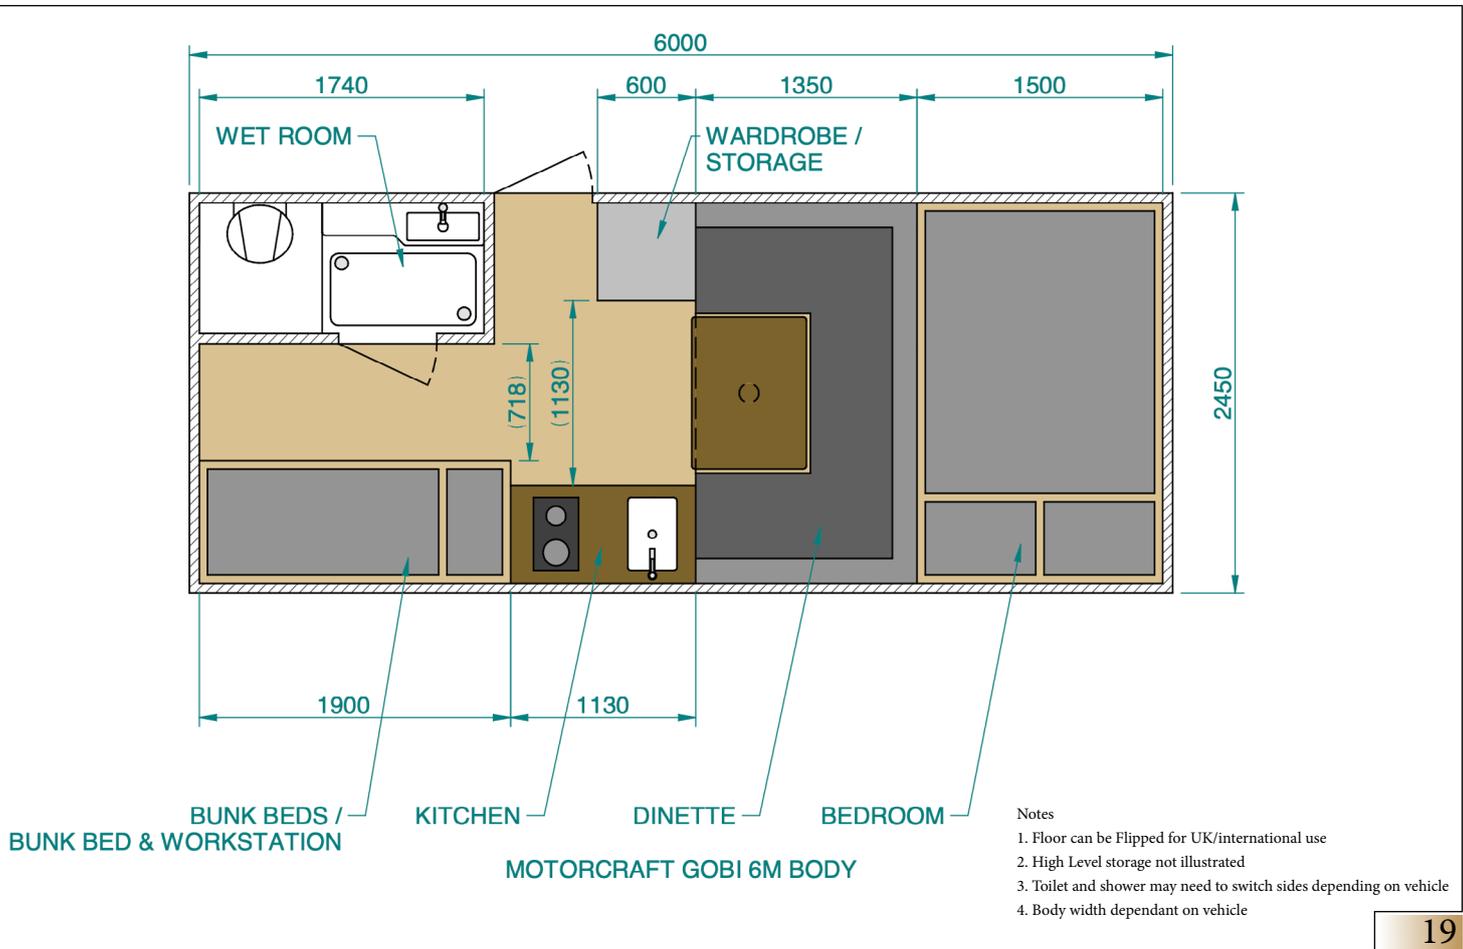

- Notes
1. Floor can be Flipped for UK/international use
  2. High Level storage not illustrated
  3. Toilet and shower may need to switch sides depending on vehicle
  4. Body width dependant on vehicle

## Gobi Layout 6m

The Gobi is both versatile and stylish. Initially designed as a permanent four birth overland family home, this layout has proven popular for those wanting a little more space.

The Gobi has the same fixed double bed and seating area as the Kalahari but has bunk beds at the opposite end, giving you a permanent four-person home. The Gobi has hidden flexibility; the twin bunks could be a trio if you need an extra permanent bed. Or perhaps you require a small office space instead of bunk beds or you just require additional storage space? Just let us know your preference.

It is available in a 6m body, note that 6m body is typically suited to long wheel based 4x4 or 6x6 trucks.

## Gobi Layout 6m

Manufactured  
for a life time  
of adventure

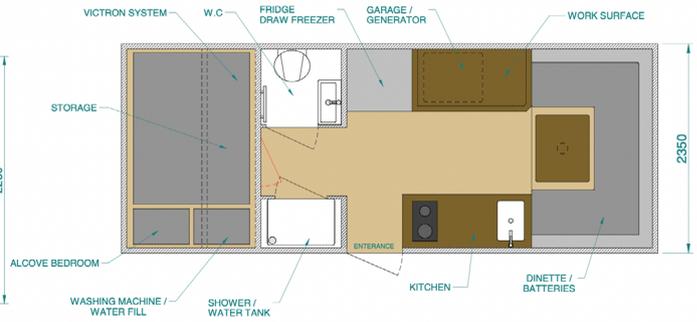

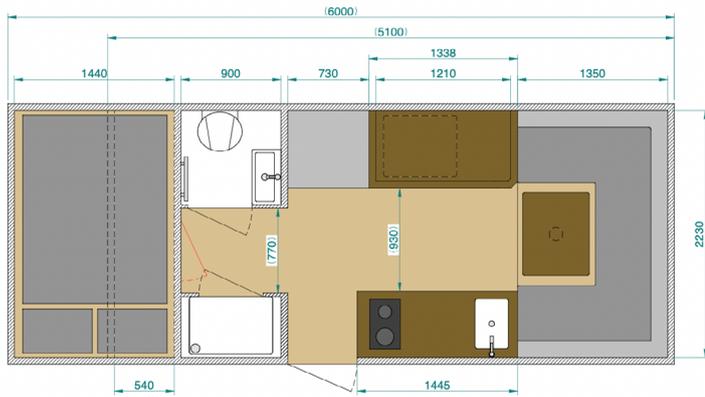

## MAN HX60 Layout 5.5m

The MAN HX60 is a tactical truck specially developed to meet military needs. Its used by armed forces across Europe. Despite being in service still, there are a high number of these vehicles for sale due to the down sizing of armed forces.

Due to the very reasonable prices these can be obtained for they are becoming increasingly popular for conversion to overland vehicles. There are a large number of components mounted behind the driving cabin using about 1000mm of chassis space, because of this the body design lends itself to a “alcove” design where the body protrudes overt the top of this equipment.

For this reason we have standardised an optimal design for this type of body and offer it exclusively for use on the MAN HX60.

*"The process of choosing a builder for an Overland truck can be quite involved. You're spending a lot of money and you want to know the people you choose are not just capable of delivering, but are willing to work with you to turn your dreams in to reality.*

*The box design, with the alcove that extends over the radiator and spare wheel area on the truck came about as an idea in one of our visits there. And we couldn't be happier with the outcome. It provides so much extra internal space and really ties the hab box to the cab visually. Throughout the process, Motorcraft were always ready with advice, thoughts and ideas to make sure our build was as good as it could be.*

*Now we've been living in it for a little over 6 months, we can see where their experience in construction and expertise in how these vehicles are used has really come to the fore, with seemingly minor suggestions in the build actually proving more than the sum of their parts in practice.*

*They keep telling us you never get your first truck right, but right now, there's not much we'd want to change about Bebe... But if we ever do find ourselves outgrowing her, or needing changes, Motorcraft will be our first port of call for another build."*

*Jess, Dave and Isla*  
[www.globaltraces.co.uk](http://www.globaltraces.co.uk)

## Body Specification

The Motorcraft standard habitation bodies have been designed by us and manufactured in-house by our dedicated body team. We use only the highest quality materials available on the market today, creating an undeniably solid and robust unit to build your home in.

We believe in building your overland body to last a lifetime, so at Motorcraft, we don't build lightweight bodies because we don't believe in them. After all, the body is the backbone of your vehicle. It has to be robust enough to withstand some of the harshest conditions on the planet while being elegant enough for you to call it home.

### Key advantages

- Extremely high puncture resistance, unlike lighter GRP composite bodies.
- Final Build weight better suited to the load rating of the vehicle.
- Flat panels allow for metallic paints to be used in the final finish.
- Each element is structural despite being in a lamination so no chance of de-lamination at any point.

Motorcraft have specifically engineered the creation of the Motorcraft habitation bodies to be thermally efficient, durable and practical.

Key features are:

- Construction of 60mm thick fiberglass/birch composite panels
- Structural Aluminium edge members
- Replaceable FRP corner protectors
- 120mm insulation in the floor with an integrated 4 point torsion-free subframe
- Integrated pull out steps.
- Body to driving cabin access with weatherproof, flexible seal and locking security door.
- Superior thermal properties  $R=1.379(K.m^2)/W$

## Entrance Door

Our premium door is fitted as standard to our standard designs, Why? Because we believe that all our customers have the right to safety and security. Our door is the most secure door available on the market today.

With a full length Stainless Steel hinge, Five point locking mechanism with pick-proof barrel and double thickness reinforced GRP there is no way you can force entry into the vehicle.

Finished off with custom made Aluminium door furniture, its elegant quality is noticeable the moment you open the door.

Visually the door matches our window and access hatch products to give your truck that Professional finish.

Our storage doors follow the same design intent as our access doors, featuring a 40mm insulated FRP door with aluminium reinforcements, and full length stainless steel hinge.

All our doors, windows and hatches are part of the same product line so they seamlessly integrate with each other to give your vehicle that high quality professional look.

## Windows

We fit our own brand in-house manufactured windows in all our builds. Manufactured with a thermally stable cold bridge free GRP frame with altitude tested sealed double glazed units.

The glass in all our windows and skylights is highly scratch resistant unlike cheaper polycarbonate products. It's certified to 43R-0114 for on highway use throughout the European Union.

All our windows are finished with our custom made Aluminium and Stainless Steel door furniture for longevity, robustness, and the quality look and feel.

Our windows come in two versions “Premium” and “Monsoon”, They are exactly the same with the exception of the lip across the top edge allowing for the window to be fully opened even in the most torrential rain without any risk of ingress along the top edge and corners.

All our windows are finished internally with our premium black out blind with integrated fly screen. Available in both black and cream giving you another opportunity to personalise the finish of your truck

If you want maximum ventilation and light, there are options to have a 400x400 or 600x600 skylight on the roof. The construction of these are the same as our window range so the seamlessly integrate into the design.

Whether want access to the top of the habitation body roof or to lay in bed and look at the stars then the Sky hatch is for you. At a huge 1000x800mm it gives unprecedented skyward views, the ultimate ventilation and access to the roof.

Motorcraft Adventure Developments recognise the importance of combining, luxury, practicality, durability and style in your overland home. This is why we are proud to boast that all our cabinetry is crafted in-house by our master craftsmen. Without compromise we use only the finest quality birch plywood, faced with a hard-wearing finish of your choice. Ensuring you have a stylish, practical and personal feel to the interior space.

With durability in mind, all the ironmongery is Stainless-Steel. With fixtures and fittings chosen by you, the customer.

The interior space not only is capable of withstanding the forces of off-road travel, it looks and feels like home.

So you can follow your dreams, whether it is a short adventure or a circumnavigation of the globe.

## Basic Overview

- Fixed double bed (except 4m Atacama)
- Seating area capable of seating 2-4 people comfortably
- Variety of colours available for seating cushions
- Kitchen area
- Bathroom Interior
- Lighting Systems
- Integrated CO2/Smoke Detector
- Complete electrical installation
- All plumbing (fresh and waste)
- LED ceiling lights throughout the living area
- Laminate flooring throughout
- Hard wearing rubber floor in the garage space

# Bathroom

All of our layouts have a spacious bathroom. Why? Because it give you that at home feel. There is no point in traveling the Earth in discomfort. Everybody loves some creature comforts and when in hot dusty conditions not much beats a refreshing shower. The products used in our bathroom builds really do give you that home away from home feel.

## Key Features

- Motorcraft white heavy-duty FRP multi drain show tray. This robust and solid feeling shower tray allows for the water to drain away after your shower regardless of what incline the truck is parked on
- Motorcraft white long life FRP stain-resistant sink unit with Hot/Cold tap
- Toilet system of your choice
- Thermostatic mixer shower
- Extractor fan

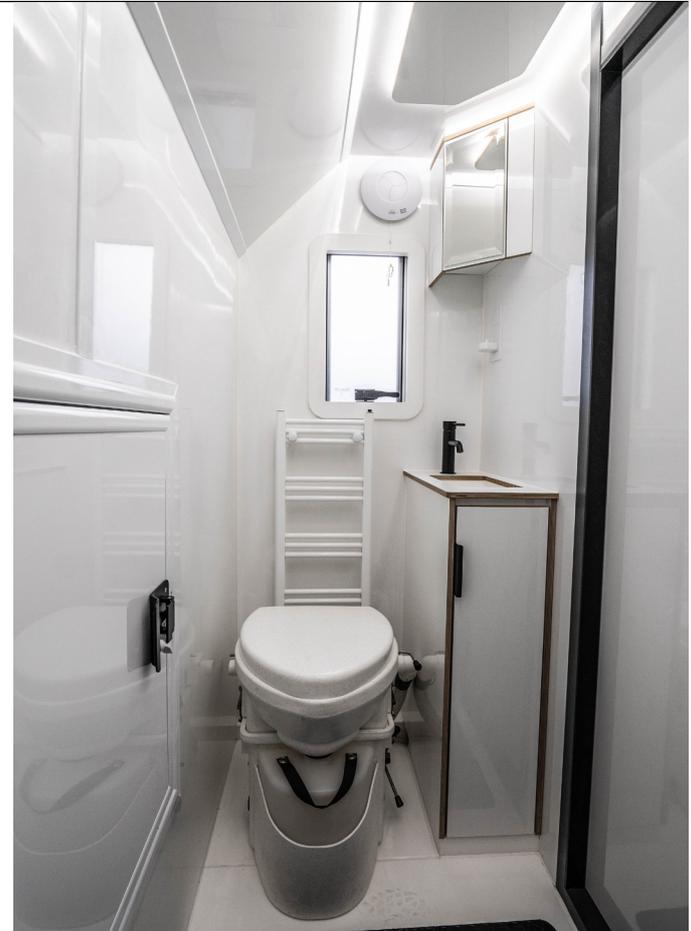

# Kalahari

Motorcraft  
Adventure Developments

## Water System

- 350L HDPE freshwater storage tank located under the raised seating area, internal mounting means you never have to worry about it freezing.
- Inside water supply including the shower is up to 10L/M flow rate (a good domestic flow is 10-12 L/M) so no limp caravan like showers.
- Motorcraft exterior water control locker with Stainless Steel fill points, waterproof 240v socket and tank level indicator.
- External Grey-water storage is dependant on the vehicle and the setup of any outside lockers, gen-sets etc.

# Heating

All of our classic designs use a hydronic heating system, this works the same way as most domestic heating systems with fluid filled radiators distributed around the truck. This gives a passive heat, this can be a bit slower to heat up than a blown air heating system but you don't have the noise or the aggressive dehydrating heat you get with blown air.

Our heaters are combi boilers that not only produce heating for your truck but also deliver on demand hot water so even with the most demanding of users you won't run out of hot water.

Available in either Gas or Diesel.

## Key Advantages

- Comfortable, silent heating all year round
- One unit delivers both heating and hot water saving valuable space
- Room thermostat integrated into touch screen control
- The slow natural movements result in the air with natural humidity
- Hydronic heat is “there” without you noticing it

## Toilets

Our bathroom builds come with a ceramic-lined cassette toilet as standard. A popular upgrade at the moment is the composting toilet. While not as convenient to use (no simultaneous liquid and solid deposits) and a slightly more manual approach to keeping clean. They offer a far superior experience when it comes to disposing of the contents. Typically a couple living full-time in the vehicle may need to empty the liquids tank every 3-4 days and the solids every 4-6 weeks.

## Incinerator

By far the nicest systems to empty as all you have to do is empty the ash pan. These are again waterless toilets, and a pan liner is used to keep things clean. The two significant issues are the gas consumption for the incineration process. The manufacturer states 160g per cycle (flush). So that's 100 flushes per standard 16kg bottle. Also, these are very technology dependent with a lot of electrical components. They can be prone to faults.

Cost - \*  
Use - \*\*\*  
Emptying - \*\*\*\*\*

## Cassette

This is the more traditional option. They are relatively pleasant to use with a good flushing system. They are generally a fair price. However, they will contribute to your water consumption due to the flush. The biggest issue lies with the emptying. You have to find somewhere to dispose of 15-19l of untreated waste. In developed nations, this is not too much of an issue, but this can come to be a tiresome chore in less developed countries.

Cost - \*\*\*\*\*

Use - \*\*\*

Emptying - \*

## Separating (composting)

This is by far the most popular choice for customers and self-builders at the moment. It's probably the hardest to use. It is beneficial (not essential) to do your two actions one after the other. It's harder to keep clean (but a spray bottle is handy), However, emptying it is easy. The liquids can easily be poured down a toilet or discretely onto the ground to soak away, and the solids (that are not compost for several months) can be double bagged. Easy stored if needed and sent for landfill. Of course, these toilets are waterless, so it extends your freshwater supply on-board. For two people, you could expect to empty the liquids every three days and the solid once a month.

Cost - \*\*\*

Use - \*\*

Emptying - \*\*\*\*\*

## Kitchen

At the heart of every home is the kitchen. The large galley has ample space for comfortable living. It has a small pull out worktop for when you need that little extra space.

We understand that everybody has a different preference for cooking appliances. That's why our classic designs come with a Gas Hob. However, this can be changed to an Induction hob (power upgrade highly recommended) or upgraded to a Diesel Hob.

We also offer the ability to install an oven. This can be either a Gas, Electric or Diesel oven. As with the hob, if you are planning on going electric, we would suggest you increase your battery capacity and possibly the inverter power.

Work surfaces can be upgraded from the standard engineered resin to either natural wood or natural stone

## Including

- Engineered resin counter top with integrated Stainless Steel sink in a wide choice of colours
- Single faucet, with hot/cold running water
- Two burner Gas hob.
- Isotherm Stainless Steel fridge/freezer

# Power System

The vehicles leisure power system is located in the rear of the vehicle under the bed. When using a silent generator, we also mount this in the centre under the bed. We do this because accessing the centre storage area can be difficult and by mounting the generator there frees up easily accessible side locker space.

- Full Victron Energy system
- 5” touch screen LCD control display
- 400ah Lithium batteries
- 5000Kva Inverter
- 910w monocrystalline solar panels
- GPS & GSM connectivity for global access and support (sim card required)
- Full battery condition monitoring and isolation in the event of out of parameter scenario.

Battery capacity upgrade option is available.

As with all our technical systems, the Victron power system comes with 12-month technical support included.

An extended support package is available, giving you the support you need when you need it.

# Upgrade Options

### Brush Rails

Brush Rails are the Stainless Steel rails that mount on the roof of your habitation body. They protect the body from impacts from low hanging trees and look great finished in hard wearing black Raptor paint.

### Roof Rack

A Stainless Steel roof rack has two functions on an expedition vehicle. It provides additional storage for any large items you may have, and much the same as the Brush rails protects against low hanging branches. These are made bespoke to your vehicle and, where possible, will include 'A' pillar brush bars.

### Hydraulic Stabilisers

Our dual purpose hydraulic stabilisation legs deploy from the chassis at the rear. Offering the ability to level the vehicle, take the rock out of the suspension and tyres, giving a more comfortable living experience.

## Winches

Winches offer that extra peace of mind when travelling in remote regions on your own. We can manufacture either front or rear-mounted winch brackets and provide electric winch rated from 4500lbs to 25000lbs

## Roof Rack Lockers

For long term roof rack storage of smaller items, locker boxes can be a helpful solution. These waterproof lockable boxes securely mounted on your roof rack are a fantastic place to keep things you seldom use but don't want to travel without them.

## Bike lifts

We offer two rear lifting options. Our cable-operated rear platform with a safe working load of 250kg. Suitable for use with a small motorbike and a single wheel. Or you can upgrade to a hydraulic rear lifting platform with a safe working load of 500kg its ideal for larger bikes, Quads and multiple wheels.

## Awning

An awning turns your outdoor space into a usable space in any weather, providing you with somewhere to sit on a sunny day or dry area to get into your waterproofs. You can deploy our easy to deploy cassette awning in minutes with minimal fuss.

## Air Con

Webasto air-condition units fitted to your vehicle cab or body or both giving you a more comfortable environment in hot, humid conditions. Depending on the final configuration, the addition of the air-con unit may impact the amount of solar you can have.

## Side Lockers

If your planning on travelling for extended periods, you need as much storage as you can get on board. A good way of getting the most from the space you have is our custom made under chassis lockable storage lockers. Manufactured from Aluminium, they will never suffer from rusting. They are lightweight but sturdy. Finished in Black Raptor paint and make the truck look perfectly finished.

## Lightbar

When driving in remote areas, it's best to avoid driving at night, but sometimes you have no choice. Extra lighting can make the difference between success and failure. That's why we only use high quality LED driving lights from LTPRTZ.

## Awning Light

This LED waterproof light brightens up the outside area, creating a cosy environment for you to enjoy.

### External gas port

Are you a fan of a gas BBQ? Do you enjoy sitting out on a mild evening with a patio heater? Then an external gas port makes it easy and safe to connect any gas appliances you have outside your vehicle.

### Outside Catering

Our outside catering unit turns one of your side lockers into a kitchen. Giving you an electric stove top, sink with running water and a work surface. So you can have all the luxuries from inside, outside.

### Re-Paint

Most used vehicles will require painting. We provide one of the best commercial paint finishes available in the UK. You may find a cheaper alternative, but we pride ourselves on providing a top to toe service. The cab's exterior is completely stripped down, including the removal of the glass for a professional finish. Included in the cost: painting of cabin, chassis and body.

### External shower

Our external shower connection provides you with a thermostatically controlled shower outside your truck. Great for rinsing off those sandy feet or getting the mud off your dog before they jump on the sofa!

### External Water pump.

Our water-fill pump means you can unreel a hose from your truck and suck up water from a clean natural watercourse. We will provide you with additional filtration to ensure that only the purest water goes into your tanks.

# Go Anywhere

## Safari Hatch

To complete the Motorcraft hatch range, we offer you the spectacular Safari Hatch, which will provide you with the option to enjoy those breathtaking views without compromising on security or introducing large windows that can make the habitation box hot. The Safari Hatch retains the same style as the windows and door. The Motorcraft Safari Hatch opens wider than a standard window, maximising those views and offering more privacy when closed. There are two additional window options available, a fixed window or an opening window, both available with or without blinds.

## Skylights

Having adequate ventilation is a must in any home and is paramount in a live-in vehicle. In hotter climates, the additional air circulation may reduce the internal temperatures, and in the cold weather, it ventilates moisture reducing condensation. The Motorcraft skylights are a superb way to give you additional ventilation and give you natural light. They are low profile and impact-resistant, double glazed with toughened glass, manufactured from GRP and available with a roller blind fly screen and blackout blinds as an option.

## Sky Hatches

In addition to the Motorcraft Windows collection, we also offer you the Sky Hatch, with an alluring design allowing you star gazing opportunities or to use as an exit to the roof. The Motorcraft sky hatch brings you the ultimate in ventilation and fantastic views without compromising on quality, made with a GRP frame and panel for thermal efficiency, Stainless Steel fixings, double glazed fixed panel window and a load assisted opening.

## Water filtration

If you plan to fill your water tanks from unknown quality water sources, we recommend upgrading to have on-board water filtration. We would always recommend storing your water lightly chlorinated (using chlorine dioxide tablets is the most common way) ensuring you have no bacteria growth within your water system. Then, use one of our filtration units as both a secondary filter (0.5um) and the activated charcoal filter to remove the chlorine's taste and smell.

# Do Anything

## Generators

Generators are a very useful tool. They serve three functions in our installations.

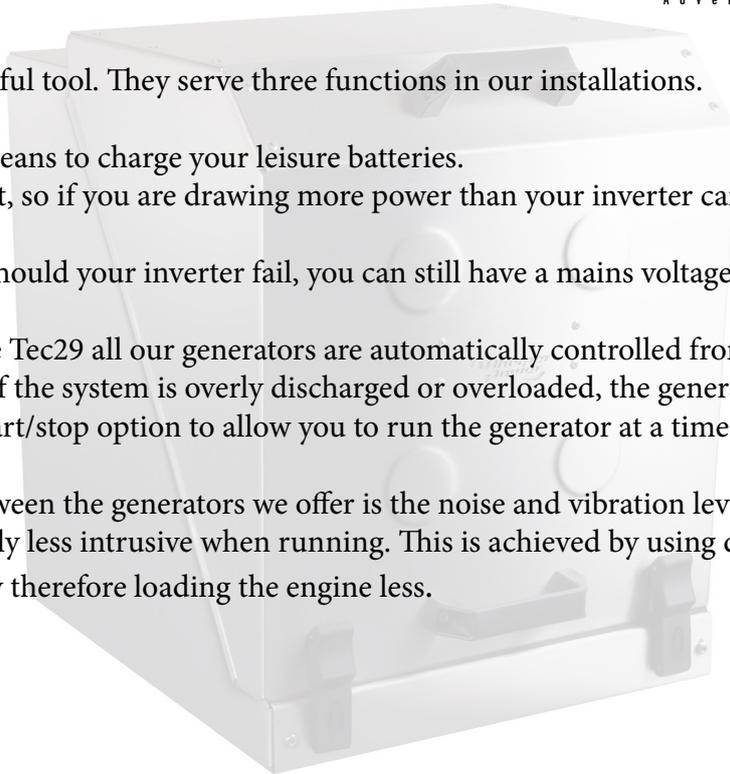

They provide a reliable means to charge your leisure batteries.

They provide power assist, so if you are drawing more power than your inverter can deliver, the generator will boost it.

They offer redundancy. Should your inverter fail, you can still have a mains voltage power supply.

With the exception of the Tec29 all our generators are automatically controlled from the Victron control system. This means that if the system is overly discharged or overloaded, the generator will automatically start. There is also a manual start/stop option to allow you to run the generator at a time that suits you.

The major difference between the generators we offer is the noise and vibration levels. The more expensive generators are significantly less intrusive when running. This is achieved by using different engines and using less of their peak capacity therefore loading the engine less.

### Dometic Tec 29

- Petrol generator, 2.6 KW, 230 V
- Variable speed generator – quiet and fuel saving
- Auto start function for automatic battery recharging
- Convenient and safe electrical starter
- Automatic low-oil cut-off protects from damage
- Overload and short-circuit protection
- Alarm functions for enhanced safety
- Operation via external control panel

### Whisper GV-4 (scalino)

- 1-cylinder Permanent Magnet generator with external PMG box (power module)
- 3.4 kV A (2.8 kW) continuous 230 V power
- High efficiency and strong peak power
- Outstanding voltage stability and a pure sine wave
- Saving fuel and ensuring smooth running of your gen-set
- Genverter Power, the best choice for your energy supply
- Also available with Stainless Steel enclosure for installation outside the vehicle

### Whisper GV-10

- 3-cylinder Permanent Magnet generator with external PMG box (power module)
- Excellent choice to replace traditional gen-sets
- 10 kV A (8 kW) continuous 230 V power
- High efficiency and strong peak power
- Outstanding voltage stability and a pure sine wave
- Saving fuel and ensuring smooth running of your gen-set
- Genverter Power, the best choice for your energy supply

### Fisher Panda 5000i Greentec

- High efficient Variable Speed Technology
- Stage 5 Exhaust emissions compliant
- Integrated water-cooled and pre-silenced exhaust inside capsule
- Lightweight at only 120kgs
- Quiet running at only 54db(A) @ 7m (@max rpm)

## Habitation Body Winterisation

Our vehicle body is capable of sustain travel in some of the harshest condition on the planet.

If you are planning on travelling in the extreme cold consistently below -8c, we recommend installing our winterisation package.

The kit includes heating elements on all exterior tanks and pipes, vehicle battery pre heater, Webasto engine block heater and a grey tank bypass valve.

## Alarm/Security Cameras

For the more security conscious, we offer a complete security system. It is made up of five cameras, an alarm unit, keypad entry and door sensors.

When the system is connected to the on-board wifi, the system will send push notifications to your mobile phone in an emergency, or you can check in on your truck at any time to see what's going on.

## Peripheral View cameras

An upgrade on the reversing camera, the peripheral view camera system uses a larger monitor in the cab allowing the use of edition cameras to look down the sides of the vehicle eliminating blind spots.

## Rear-view camera

Some drivers often appreciate a review camera. Installed so it can be left on while driving and manoeuvring, giving the driver a clear view of the road behind.

## On-board WiFi

We offer both 4g and 5g on-board Wifi Systems. Using a compact industrial router with dual sim slots giving you network fail over, so if you don't have data on one SIM, it will default to use the other. It includes a GNSS/GPS antenna adding the additional functionality of a vehicle tracker with a geofencing option to keep your vehicle safe and secure
